

## EFC Systems announces integration with Adapt-N

Brentwood, TN, August 26, 2016 – EFC Systems, Inc. is pleased to announce deployment of integration between its FieldAlytics product and Agronomic Technology Corp’s Adapt-N nitrogen recommendations and monitoring system. With this functionality now in mass release, FieldAlytics users have the ability to leverage field data already on file to automatically generate powerful, unbiased, and scientifically validated variable rate nitrogen recommendations. This provides users easy access to Adapt-N’s proven nitrogen diagnostics, alerts and recommendations furthering the retailer/dealer’s ability to drive sales.

“We achieved our goal to make the data flow easily between systems, letting FieldAlytics users add additional knowledge and insight into their growers’ management decisions. We’re excited to offer Adapt-N’s service to our users without requiring them to work within separate tools.” said Devron VonGunden, EFC Systems’ Senior Product Manager for FieldAlytics. The first phase of the integration makes Adapt-N’s in-season recommendations available for corn fields in a wide geography. Over the coming months, a number of additional features will be added, including the optional automatic syncing of soil test, yield, and other management data layers between the systems.

“This capability provides seamless access to market leading decision tools” said Ernie Chappell, EFC Systems’ President & C.E.O. “We see Adapt-N as a leader in Nitrogen management.” EFC Systems’ customers have flexibility to utilize and market Adapt-N to their grower customers in a flexible fashion, and can optionally choose which fields should benefit from the joint offering.

“At Agronomic Technology Corp, we strive to go where the data is, and empower users to gain additional value from the tools they’ve already selected,” said Agronomic Technology Corp’s C.E.O., Steve Sibulkin. “We’re excited to partner with EFC Systems to promote sustainable profitability across its user base,” he said, in reference to Adapt-N’s demonstrated ability to improve grower profit while reducing nitrogen losses to the environment. “Adapt-N is offered independently, with a solid scientific foundation, and has been recognized by the industry as setting the standard in nitrogen modeling,” Sibulkin said, citing the tool’s recent [NutrientStar](#) validation, and that it is also a top tier solution in [Walmart’s Supplier Sustainability Toolkit](#).

### ABOUT EFC SYSTEMS

EFC Systems delivers technology solutions throughout the entire Agribusiness supply chain holding numerous patents related to precision technology. EFC Systems supports advanced farming practices and enables seamless data connectivity among growers and their agricultural service providers.
